

ACE-LD

Low Profile Brewing for Thermal Servers

Newco designed the **ACE** series of brewers to satisfy customer requests for a multi-feature brewer suited for the office environment.

ACE models incorporate unique design features that include: a water level detection system that eliminates evaporation short pots, an adjustable brew safety light which flashes during the brew cycle to alert the user the brew cycle is in process, and a gravity hot water faucet system which dispenses hot water while brewing without altering the brew volume.

All the features are built into a stainless steel cabinet for long stability and durability.
