Inspect Immediately after Transporting the Product

After receiving the shipment, inspect the product thoroughly to ensure that it has been shipped with care. Before turning the power on, please check the following:

- Check the cabinet for damage or shifting that may have occurred during shipping. Are there any dented portions or defects (cuts, etc.) on the external surfaces of the cabinet?

- Are all the legs and adjusters/levelers/feet intact?

- Do the power supply voltage and frequency requirements meet with those of the location (110V/220V)?

- Are all wires linked correctly and securely connected to each other? If coupled in an incorrect manner, the connection will not be made accurately and it could cause not only irreparable damage to the machine, but is also a potential fire hazard. **DO NOT INSERT CONNECTORS FORCIBLY.**

- Check that all the cables, including power cables, are undamaged. Do power cables or other wires have any splices, cuts, or dents?

- Have you been provided with all of the associated accessories? **Tip:** Most of the pieces required to assemble the table are shipped within the table. Use your table key to unlock the table and check parts for damage or other problems.

- Can all doors/lids be opened with the accessory keys? Can doors/lids be firmly closed? If applicable, does the coin box key open the coin box(es)?
Safety Instructions

This equipment may contain hazardous voltage which can cause electrical shock. Only qualified personnel* should work inside the equipment.
*Note: Keep reading for a list of qualified personnel.

To maintain personal safety and the safe operation of this product, read the entire manual before using it. The following instructions are intended for the users, operators, and the personnel in charge of the operation of the machine. Be sure to keep this manual close to the product or in a convenient place for future reference.

IMPORTANT NOTICES

This product is intended for indoor use only

This is NOT a child’s toy; adult supervision is required for children to play this game. Children under 120cm (roughly 4ft) in height should not approach the table while it is in use, as this could be hazardous.

Do not sit, climb, or lean on the table. Do not place anything, including people, on the top of the playfield.

Do not drag the table when moving it, as this could damage the legs, levelers, or unit beyond repair.

Do not place any food or drinks on the table. Use cup holders, if provided.

This game features flashing lights which may not be suitable for photosensitive epilepsy.
Definition of Site Maintenance Personnel or Other Qualified Individuals

WARNING

Servicing and maintenance work of the contents herein stated should be performed by the SERVICEMAN stipulated as per IEC Standard. Those who do not have technical expertise and knowledge other than the SERVICEMAN are not allowed to perform the work herein stated. Executing the aforementioned work by such non-technical personnel can cause serious accidents that may endanger life.

Replacing parts, maintenance inspections, and troubleshooting should be carried out by Site Maintenance Personnel or other Qualified Professionals. This manual includes directions for potentially dangerous procedures which should only be performed by professionals with appropriate and specialized knowledge.

The Site Maintenance Personnel or other Qualified Professionals mentioned in this manual are defined as follows:

- **Site Maintenance Personnel:** Individuals with experience in maintaining amusement equipment, vending machines, etc., working under the supervision of the owner and/or operator of this product. Maintenance Personnel frequently service machines within amusement facilities or similar premises by carrying out everyday procedures such as: assembly, maintenance inspections, and replacement of units or replaceable parts.
  
  o **Actions Approved for Site Maintenance Personnel:** Machine assembly, maintenance inspection, and replacement of units or replaceable parts.

- **Other Qualified Professionals:** Personnel employed by the amusement equipment manufacturer. Personnel may also have been involved in design, production, testing, or maintenance of said amusement equipment. This individual should have either graduated from a technical school or hold similar qualifications in electrical, electronics, or mechanical engineering.
  
  o **Actions Approved for Other Qualified Professionals:** Assembly, maintenance, inspection, and replacement of units or replaceable parts for amusement equipment and/or vending machines, including repair or adjustments of electrical, electronic, or mechanical parts.
Before Using This Product

In order to ensure the safe operation of this product, please be sure to read the entire manual before operating the machine. The following instructions are intended for users, operators, and personnel in charge of the operation and maintenance of the machine. After carefully reading and sufficiently understanding the warning displays and cautions, please handle the machine appropriately. Be sure to keep this manual for future reference.

Qualified Personnel: Only personnel who have technical expertise should perform the work stated herein to avoid hazardous situations. The instructions state that site maintenance personnel should be the only personnel performing work. Please perform maintenance work in accordance with the stated instruction; provided instructions for maintenance work are to minimize risk and prevent accidents. Failing to perform work as stated within the Instruction Manual may potentially be dangerous to both maintenance personnel and users.

- **Be sure to turn off the power before working on the machine.** To prevent electric shock, be sure to turn the power off before carrying out any work that requires direct contact with the interior of the product. If the work is to be performed in the power-on status, the Instruction Manual will state to do so.

- **Be sure to ground the Earth Terminal.** This is not required in the case where a power cord with earth/ground is used.

- **Ensure the power supply used is equipped with an Earth Leakage Breaker.** This product does not incorporate an Earth Leakage Breaker. Using a power supply which is not equipped with an Earth Leakage Breaker can cause a fire when or if earth leakage occurs.

- **Before installing the product, check for electrical specifications; the product must meet the requirements.** Ensure the product is compatible with the power supply voltage and frequency requirements of the location. Using any electrical specifications that are different from the designated specifications can cause a fire and/or electric shock.

- **Install and operate the product where appropriate lighting is available, allowing warning and safety labels to be read clearly.** To ensure customer safety, labels and printed instructions describing potentially hazardous situations are applied to places where risk for potential accidents are increased.

If any label is peeled off, apply it again immediately. Please contact Barron Games Technical Support at 1+716-866-0054 or email service@barrongames.com if you are in need of new stickers or parts. Visit www.BarronGames.com for more information about Barron Games’ Parts and Service Department.
INSTALLATION AND MAINTENANCE SAFETY

This product is an indoor game machine. Do not install it outside. Even indoors, avoid installing it in the places mentioned below to avoid causing a fire, electric shock, machine malfunction, or even death. Do not install or maintain this product in/on/within/near:

- places subject to rain or water leakage, places subject to high humidity, or in the proximity of an indoor swimming pool, shower, steam room, etc.

- places subject to direct sunlight, places subject to high temperatures, or in the proximity of heat dispensing units or portable heating devices.

- places filled with inflammable gas, within the vicinity of highly flammable or volatile chemicals, or other hazardous materials.

- dusty places.

- sloped surfaces.

- places subject to any type of violent impact.

- the vicinity of anti-disaster solutions, such as fire exits and extinguishers.

- places where the operating (ambient) temperature range is not 5°C to 30°C (41°F to 86°F).

- places near water or spray from water (such as a jet wash, hot tub, or swimming pool).

To ensure maximum safety for the users and service personnel, ensure that where the product is operated has sufficient lighting to allow all safety labels to be read clearly. Operation under insufficient lighting is not advised.
ASSEMBLY NOTES

1. Read this Instruction Manual carefully before assembling or playing.

2. Ensure that there is sufficient space to place and shift the product prior to assembly.

3. **2 strong adults** are recommended to assemble the product.

4. Inspect and ensure all parts are securely attached before rotating the table.

5. Please Note: Children and pets should be kept away from assembly and game pieces; this machine contains small parts that could be a potential choking hazard.

6. **DO NOT TAP POWER TO THE TABLE.** All card swipe and table accessories (including toppers) must be powered independently.

TOOLS NEEDED

- Instruction Manual with Step-by-Step Assembly
- Screw Driver or Drill
- Scissors
- Door Key (located inside the table)
- Allen Wrench/Key (included with optional topper kit)

*Note: Please retain the original packaging, so that it may be used for storage or transport later.*
Assembly - Step A (Prepare the Table)

1. Use scissors or a knife to cut through the packing tape. Use caution not to cut too deeply or you may damage the unit.

2. Open the cardboard box to ensure the wooden side is facing up and the playfield is facing down to the floor.

3. Use a screw driver or drill to unscrew the 4 screws on the panel with the sticker marked “PARTS” on it. Once the panel is opened, please take out the parts indicated below.

For Legs
16 Roundhead screws M8x25
16 Flat washers M8x16

For machine
Assembly - Step A (Prepare the Table)

4. After taking out the keys, open the center door panel, and remove all parts from inside the machine’s body.

Inside Accessory Boxes:
- 20 Pucks
- 4 Mallets
- 1 Table Polish & AC Power Supply Cord

(Do not remove air blower)

Power cord holder

4 Table Legs
4 Adjustable Leg Levelers
1 Accessory box (Accessories inside)

Assembly - Step B (Assemble the Table Legs)

1. Take out the 4 plastic legs and screw the adjustable leg levelers in to the base of the legs. Place the legs on the bottom surface of the table. Ensure alignment and then attach them with the big flathead screw M5x35 and washer M8x16. *Make sure grey surface is facing out.
### Assembly - Step 3 (Assemble the Table Legs)

2. Ensure all legs are tightly attached then flip the table 90 degrees. This requires at least **TWO** adults. Flip another 90 degrees to place the legs on the ground. *Place the included foam padding on either side of the goal release bay. Take caution not to damage the goal bay or LED lights.*

*Make sure grey surface is facing out.*

</table>

![Diagram of table legs being assembled](image)

Ensure all legs are tightly attached then flip the table 90 degrees keeping the cardboard top on to prevent scratching. This action requires 2-4 people. Flip it another 90 degrees to place the legs on the ground.

![Finished Position](image)
Assembly - Step 3 (Locate Internal Hardware)

First, ensure the power is off. Open the door with the key. Hold the handle and pull it out until half of the power panel is exposed. Do not touch open terminals or exposed wires while the game is on.

Power Supply

This provides power to all internal components, such as the motherboard, coin mechanism, motor... etc. The +5v and +12v are separated to ensure no interference to components when one has an insufficient supply or an unstable supply of power. Note: Avoid electric shock. Do not touch open terminals or exposed wires. Please turn off the game to perform repairs.

Note: +5v is on the left  +12v is on the right

Motherboard / PC Board (PCB)

This controls the operation of all internal components. Malfunctions or errors with any of the components can be diagnosed by looking at the LED light indicators on the motherboard.
Assembly - Step 3 (Program the PC Board)

**LEDs:** Leading Edge Display
- NC2: Display panel connection outlet
- NC313: Direct Current (DC) Input outlet
- NC35: A1 Output Control point
- NC36: B1 Output Control point
- NC311: Electro-magnet switch for goal gates (solenoid)
- NC3: Rail Strike Detector
- NC4: Rail Strike Detector

**Volume Control:**
- DIP SW1
- DIP SW2
- NO-NC button
- Transformer

**Volume Adjustment:**
- All switches here must be done for game to function.

**Warning:**
- LEDA: Running LED lights around table
- NC40: Rail Strike Detector
- NC41: Rail Strike Detector
- NC42: Rail Strike Detector
- NC43: Strike Detector
- NC310: Blower output
- NC312: Alternating Current (AC) Output
- R3: Sound Effect and Volume adjustment
- VF1: Total Volume Adjustment
- SPEAK: Sound Output

</table>
After Installing the Game

1. Check the voltage regularly to avoid a short circuit or potential fire. Do not overload the circuit.

2. Keep the power cord out of areas with busy foot traffic to ensure the safety of users and the machine.

3. Keep children away from all power sources and power supply units. Older children should always be under adult supervision while using the machine. Small children should not operate this machine.

4. Regular maintenance should be performed on the machine to ensure that it is clean, smooth, and debris-free (see section “Care and Maintenance”).

5. Do not use any sharp instruments on any part of the machine as it may cause irreparable damage.

6. Remove and replace any piece or part that becomes damaged.

7. Turn off the game and have it inspected by an electrician or service technician if it is operating abnormally.

8. Contact an electrician or service technician if your product experiences the following:
   - Power Failure
   - Liquid or Objects Found Near/Inside Electronic Components
   - Abnormal Sounds

9. Use the leg adjusters to level the table if necessary.

10. Use caution while transporting.

11. Do not use outdoors or in damp areas.

12. Take extra care when handling the playfield, it may break.
Care and Maintenance

1. Use a soft cloth and product-specific polishing spray to clean the unit. We recommend using a microfiber cloth. THE PLAYFIELD SHOULD BE CLEANED WITH PRE-APPROVED HOCKEY TABLE POLISH ONLY. Air holes on the playfield may become clogged if a household cleaner is used.

2. Dust, grime, and other debris can collect inside the body of your table over time. Vacuum out the inside cavities frequently. NEVER ATTEMPT to clean the interior while the game is operating.

3. Clean any dirt or debris from the main PC Board with a soft brush or dry cloth. NEVER USE WATER OR OTHER LIQUIDS. Always be sure to turn off or unplug the machine before opening the PC Board panel.

4. Any non-ammonia non-bleach based household cleaner may be used to wipe down the poles, side panels, and legs.

5. Periodically check the functionality of the coin mechanisms and empty coin boxes.

6. Perform maintenance work in accordance with these instructions. Be sure to always turn off the power before servicing the machine.

DO NOT TAP POWER TO THE TABLE.
All card swipe and table accessories (including toppers) must be powered independently.
Troubleshooting

Having trouble assembling your new table?
Call our experts in the Parts and Service Department (1+716-866-0054) or email Service@BarronGames.com and we will be happy to assist you!

Glossary of Common Errors

- **5V and 12V Power Supplies**: The 5V and 12V power supplies regulate and disperse power to the PC boards, LEDs, and other electronics. The 5V and 12V power supplies are separated to ensure that there will not be any power instability between components. (*Note: Left is 5V; Right is 12V)*

- **Counters**: The counter records the number of games played, coins inserted, or tickets dispensed (depending on model and equipment).

- **Display Panel Light and Puck Chute Light Control Cards**: These cards control the display panel and puck chute lights.

- **Optical Goal Sensor**: Check the PC Board error lights to make sure the optical goal sensor light is not on.

- **PC Board**: The PC Board controls the game operation. All adjustments to time, goals, or lives (depending on model) are made using this PC Board. Errors can be diagnosed using the error lights found near the top of the board.

- **Voltage Issues**: Voltage issues may be due to a card swipe system attached to the table which is causing the power supply to be unstable. **Card swipe systems must be attached to their own power supply.**

  The 12V/5V power supply which is in the table can have its output adjusted by using the knob (called a “trimpot”) on the front of the power supply. Check the voltage coming out of the power supply. If you are not using a card swipe system, adjust the trimpot by rotating it clockwise or counter-clockwise as necessary to increase or decrease the output.
Error Lights

Check the Instruction Manual against the PC Board error codes to begin. For the digital models, the LED screens above each goal will show an errors code when the table is out of order. When there is an error, press the Troubleshooting Button.

Light A: Goal Sensor Error Light Signal

This light will flash if a goal is scored. However, if this light is steadily on and there are no pucks in the table, this part may need to be replaced or there may be debris blocking the sensor. The release solenoid might not be retracting which could cause a puck to remain in the view of the sensor.

Light B: Start Button Light Signal

Light C: Coin Mechanism Error Light Signal

This light will flash when a coin is passed through the coin acceptor. However, if this light is steadily on, check to make sure that the N.C./N.O. ("Normally Closed" or "Normally Open") setting is set to N.O. The Coin Mechanism may need to be replaced if the problem persists.

Light D: Ticket Error Light Signal

This light will flash as the tickets are being dispensed. However, if this light is steadily on, check to make sure the N.C./N.O. and 0V/5V settings are set to 0 and N.O. The ticket mechanism may need to be replaced if the problem persists.

Light E: Rail Noise Strike Error Light Signal

This light will flash when a puck hits a rail to signal the PC Board to make a strike noise. If the light is steadily lit, adjust the VR (Variable Resistor) until it turns off.
Coin Mechanism Wiring Diagram
